

Bushfire Home Protection Kit

WASP brackets are wind and heat resistant and clip on quickly & securely with any household pole long enough to reach your gutters. They are fully adjustable to fit all types of gutters

This Kit Includes

2 Patented WASP gutter mount sprinkler brackets with built-in adjustment for higher roof pitches. Gets water to the roof top where needed to protect the home from burning embers created by bushfires. *North American model shown

2 Sets of fire department grade lay-flat hose in 7.6m lengths with standard garden hose connectors. Used by firefighters to combat bushfires because it weighs a fraction of the same size of rubber or plastic hose and compacts to an incredibly small package for storage. Great for home and garden, marine and other uses where ease of use and compact size are needed. Excellent for anyone tired of manhandling standard heavy and awkward garden hose.

2 Agricultural-grade sprinkler heads designed for irrigation and used by farmers. The sprinklers are rated for a 10m spray radius and use less than one-fifth the water of standard garden sprinklers.

2 Patented WASP fence/fascia mounts for sprinkler use for homes without gutters, or for mounting sprinklers to walls or fences when needed. Used by firefighters to protect equipment and gutterless structures from bushfires.

Patented Gutter Mount Sprinkler System
Developed for and used by Fire Departments

WASP Gutter Mount Sprinkler Systems are
standard, required equipment in
British Columbia, Canada

“When the sprinkler systems were deployed and put to use to protect structures, they worked exceptionally well. The only way I can describe it was that it looked like an island of green in a sea of black”

Lieutenant Greg Broadway - Thornhill Fire Department

This kit works with standard water connections and will work to help defend all types of homes from burning embers prevalent during bushfire emergencies. Kit contents will help protect a standard home.
